

annotationGeometry

id · unique within project

projectId · uniqueprojectId

shapes · array of { Shapes }

Shape is a: "ShapePoints" | "ShapePolyline" | "ShapePolygon"

referenceType · "scene" | "asset"

referenceId · id of target HDTScene or DigitalAsset

version · integer

createdAt · createdBy · updatedAt · updatedBy · erasableAt · erasableBy

Immutable after creation: referenceId referenceType

annotationData

id · unique within project

projectId · unique projectId

label · string (short title, non-empty)

description · string (free text)

content · any

class · string | null (e.g. damage, restoration...)

visibilityType · "scene" | "asset"

visibilityId · id of target HDTScene or DigitalAsset

version · integer

createdAt · createdBy · updatedAt · updatedBy · erasableAt · erasableBy

Immutable after creation: visibilityId visibilityType

annotationGeometry ref

annotationData ref

annotationLink

id · unique within project

projectId · unique within project

geometryId · ref to annotationGeometry.id

dataId · ref to annotationData.id

version · integer

createdAt · createdBy · updatedAt · updatedBy · erasableAt · erasableBy

geometryId · dataId immutable after creation

(geometryId, dataId) unique

scene consistency: geometry.referenceType × data.visibilityType combinations must satisfy the rules in the Visibility Rules table
